

As a full-service EPC firm, Professional Consultants Inc. (PCI) provides the highest level of flexible, integrated engineering, procurement, and construction services to some of the most respected, and technically demanding, companies in the world. PCI serves a wide variety of markets and industries through our core areas of expertise, including Controls, Facility Engineering, Mechanical Processes, and Power & Energy Management.

Project Manager

PCI is seeking a Project Manager with a minimum of five years experience leading multidiscipline engineering and construction projects. Qualified applicants will be engineers or project managers with equivalent work experience. Experience in the metals industry is a plus. These positions are located in customer's metals manufacturing facilities. Candidates should be familiar with the following:

- Project problem solving
- Project scope development
- Perform Cost vs. Benefit analysis
- Prepare capital funding requests
- Project budgeting and scheduling
- Specifying purchase of engineering services and equipment
- Project construction management

Candidates must be self-motivated to drive and complete projects from conceptual development through construction completion. Excellent communication skills will be required. Individuals in these roles will interface frequently across customer's organization to complete capital improvement projects. The successful candidates must become knowledgeable of customers' safety policies, acceptable job-site safety practices and enforcement of safety policies. PCI offers a competitive salary and benefits package.

Professional Consultants, Inc. offers an excellent benefits package and opportunities for advancement. If interested, please send us your resume.

Professional Consultants, Inc. is an Equal Opportunity Employer and a Drug Free Workplace.
